

Project Design Phase-I

Solution Architecture:

- in above architecture we described that, if any cattle or some other animals are entered into the field.
- That was detected by the sensor which are fitted in the fields.
- The information is detected by the **Raspberry pi** which is the gate way for the **cloud storage**.
- After the information is stored in the cloud storage .
- The information is given to the former through the mobile app.
- After the information is received the former send the **Drone** to send the cattle to go away from the filed.
